

7TH STEERING COMMITTEE MEETING AMONG GAP PARTNERS

The GAP Project: Advancements and Achievements Ahead

online

On February 17th, we met online with our European partners to continue our discussions on the next steps of the GAP project. We first expressed our satisfaction with the completion of WP2, which has led to the conceptualization of the self-assessment toolkit. This tool will enable higher education institutions (HEIs) and other stakeholders in higher education to better evaluate the extent of the disparity between students who have the opportunity to participate in mobility programs and those who do not.

We then turned our attention to the future by advancing our efforts on WP3 and WP4, which respectively allow us to refine the toolkit and present it in practical settings, as well as create a dynamic visualization. These constructive exchanges among all project partners reflect our collective enthusiasm as we witness the project progressing toward new milestones.
