

DATA REPOSITORY

The information below is transformed into an understandable graphical representation, through the use of a **data visualisation dashboard**.

A **web-based system** was created that enable higher education institutions to visualise the collected data in a user-friendly graphical interface, allowing them to filter the dimensions of the analysis and compare the information obtained in order to identify very clearly the differences between their **overall student population** and their **mobile student** population.

This dashboard provides a summary view of the important information, **key indicators**, and **relevant metrics**. Data is displayed in the form of charts, graphs, and other visualisations, arranged on a single screen. It can be accessed online or via mobile devices, making it a convenient tool.

The final version of the dashboard is now available just below.
